sustainable development is one of the most influential visions guiding future societies encompassed within its vision are various domains where improvements are desirable such as social equity environmental degradation climate change in the work towards sustainable development firms government authorities and individuals face various practical challenges tied to these sustainability domains when facing these challenges they may implement sustainability solutions that is solutions that are framed in the context of contributing to sustainable development this thesis deals with a particular sub set of such sustainability solutions namely integrative and multi functional solutions these solutions are characterized by the ability to provide different functions through value creation within several different sustainability domains and require organisations or units of organisations to further integrate material energy and informational flows in order to implement the solution integrative and multi functional solutions may play an important part in the transition towards sustainable societies since the integration of material energy and informational flows may bring with it synergistic benefits furthermore the contribution of these solutions to several different sustainability domains reduces the risk of problem shifting and it may be more cost efficient to have one multi functional sustainability solution than to have one for each sustainability related challenge however if integration and multi functionality are desirable characteristics of future socio technological systems we need ways to systematically assess them and facilitate their implementation when it comes to the assessment there is a need to find an assessment methodology that can handle capturing the synergistic benefits and multiple functions of such solutions furthermore the methodology also has to conform to the value pluralism inherent to sustainable development dealing with this value pluralism when trying to assess which solution among many to implement can be challenging

as comparative judgements have to handle potentially conflicting value orientations goals empirics and ontologies as for the facilitation of their implementation integrative and multi functional solutions tend to be more difficult or at least different to implement than traditional single minded solutions since they require traditionally separate organisations to cooperate therefore this thesis aims to contribute to understanding the process of implementing integrative and multi functional solutions specifically the thesis explores how to select indicators for assessment how assessments may aid decision makers to deal with the value pluralism of sustainable development when making comparative judgements and how to strengthen the internal capacity of groups of actors to engage in collective action regarding the selection of indicators the thesis suggests two different pathways either one may base indicator selections on stakeholder discussions where stakeholders come to a consensus around which indicators are important to assess or one may base indicators on operationalising pre defined sustainability objectives namely sorting contextualising and reformulating pre defined sustainability objectives so that they fit the purpose of the assessment a mix of both pathways is also possible in other words using both stakeholder discussions and the operationalisation of pre defined sustainability objectives to motivate and justify the selection of indicators as for how assessments may aid decision makers the thesis advocates for a discursive approach based on the primacy of decision support tools over decision making tools meaning that the tools should support informed decisions but not make them for the decisionmaker here contributions are made in the form of motivations for the discursive qualitative approach to decision making and exemplify how decision support tools may be designed and a method is presented and developed that enables this kind of informed comparative judgements this method builds on multicriteria decision analysis methodology but makes a few key contributions to the selection of indicators mentioned previously and to how to compare different alternatives and judge which of the alternatives is the preferred finally contributions are made to the practice of facilitating integrative and multi functional solutions through showing how the theory of institutional capacity building can be used to guide design development and evaluation of interventions aimed at facilitating such solutions institutional capacity building represents the ability of groups of actors to engage in collective action something that seems to be often needed to implement integrative and multi functional solutions historically this theory has been used to study how different events influenced the capacity of actors to engage in collective action however in research performed within the bounds of this thesis the theory is expanded for use in a proactive manner thereby contributing with insights and inspiration to others that may seek to facilitate the implementation process of integrative and multi functional solutions

the increasing demand for rural land and its natural resources is creating competition and conflicts many interested parties including farmers nature conservationists rural residents and tourists compete for the same space especially in densely populated areas agriculture recreation urban and suburban growth and infrastructure development exert a constant pressure on rural areas because land is a finite resource spatial policies which are formulated and implemented to increase the area allocated to one use imply a decrease in land available for other uses as a result at many locations multi purpose land use is becoming increasingly important this notion of multi purpose land use is reflected in the term multifunctionality this volume provides insights into viable strategies of sustainable management practices allowing multiple functions sustained by agriculture and natural resources in rural areas it shows how the rural economy and policies can balance and cope with these competing demands and includes numerous case studies from europe north america and developing countries
